Learning Activity #4B
Utility Incentive Research

Instructor Directions:

This exercise can be done in groups or individually. Explain the exercise to the students and break the class into groups, ideally 4-5 students per group, or let students work individually. You could assign groups different localities or let them research their own specific area.

Estimated time for students in group: 15 minutes
Overall estimated time for activity: 30 minutes

Participant Directions

Research resources in your City, County, or State that provide rebate incentive information including utility companies, websites, government agencies and other organizations. Identify any specific requirements or steps that need to be followed.

Tip! Access www.dsireusa.org database of Energy Efficiency incentives for your state.

HINT: when accessing the database, un-check the Renewable Energy box to narrow your search results. List the local incentive resources you identified.
